

TABLE MOUNTAIN CREATIVE CONCRETE

TRANSFORMING YOUR EXISTING CONCRETE

CONCRETE REACTIVE STAINS AND DYES

Reactive stains are a unique architectural accent designed to color cementitious surfaces, using a combination of reactive metallic salts in water-based solutions. The result is a permanent colorization, tinting or staining of the treated surface. Add multiple colors and patterns and you have a one-of-a-kind beautiful surface.

"Table Mountain Creative Concrete is one of the finest contractors I have had the privilege to work with. Where quality, integrity, dependability, and honesty are important, Stan and Sheila Squires, and TMCC stand tall. I recommend them with the highest regard."

Jim Rowe,
Miracote Division of
Crossfield Products

CONCRETE ACRYLIC AND WATER-BASED STAINS

Water-based and acrylic stains are designed to be used on new or old concrete. They can be used on previously painted concrete surfaces with proper preparation. They work well on interior or exterior projects and are ideal for horizontal or vertical surfaces. Their resistance to acids, ultraviolet rays, oil and gas make for a durable and beautiful finish.

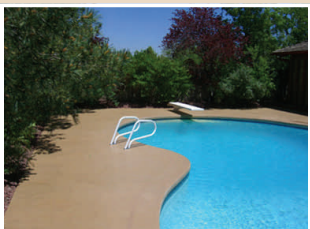

TABLE MOUNTAIN
CREATIVE CONCRETE

This beautiful backyard patio and seating area is stained with Kemiko Golden Wheat, engraved with a flagstone pattern, and sealed with a solvent-based clear sealer.

"We were extremely pleased with all those who worked on our project and found them all so pleasant, reliable and honest. Our patios turned out more beautiful than we expected and we would highly recommend Table Mountain Creative Concrete to anyone. You exceeded our expectations."

John and Pam B.,
Morrison, CO

The texture trowel on this wonderful swimming pool is a Miracote overlay, colored with Provincial Tan. Slip resistance material was added to the sealer.

SAW CUTS, ENGRAVING, AND STENCILS

Staining and engraving a design into concrete creates a long-lasting, easy-to-maintain alternative to popular flooring. The designs can be simple or complex, resulting in extraordinary works of art. It is an ideal process for unique one-of-a-kind designs and logos. Unlimited patterns and stencils are available. Unlike carpet, it will not collect allergens and, if taken care of, will never need to be replaced.

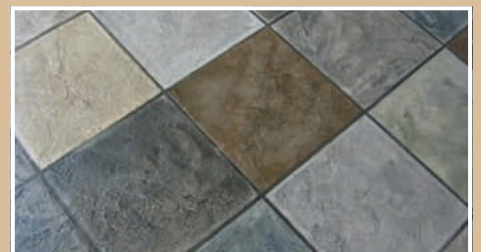

STAMPED OVERLAYS

Mirastamp is a polymer modified, two-component cementitious architectural system that is installed at a thickness of 1/4" to 5/8". It develops a high compression strength and abrasion resistance surface that is suitable for heavy-duty and pedestrian traffic. It is designed for interior and exterior applications over new and existing concrete surfaces.

SPRAYED AND TROWELED OVERLAYS

Modified Polymer Coatings (MPC) is a high performance resurfacing product. It is applied in two applications and is resistant to salts, water-borne chlorides, and spalling from freeze-thaw conditions. It is ideally suited for interior and exterior resurfacing of concrete, concrete block and masonry. It is one of many Miracote products that will help a project earn LEED points and protect the environment.

WATERPROOFING SYSTEMS

Miracote Miraflex II Decking System is a multi-layered promenade deck coating consisting of formulated resins, cementitious underlayment and a waterproof membrane. It is designed to provide a decorative, water-proof deck suited to new construction or deck renovations. Miraflex II can be finished with a variety of colors; overlay textures, such as sprayed, knocked-down, troweled and stamped; and patterns, such as tile, flagstone, and ashlar. A protective clear sealer adds the final finish.

Repair Mortar was used to eliminate the drainage problem of this entry way. Once this was done, a stamped overlay was applied and the new and original steps were stained with Smith Color water-based stain.

CONCRETE RESTORATION AND REPAIR

Miracote Repair Mortars are liquid polymer and cementitious-based products ideal for concrete restoration, resurfacing and leveling. They also function as an underlayment for overlays, carpet, linoleum and tile. To repair cracks and damaged control joints, we use a two component flexible joint repair system.

"Thank you for the excellent work. The resultant concrete floor is beautiful! True FLOOR ART!"

Mark T.,
Westminster, CO

EPOXY AND SEAMLESS FLOORING

The main purpose for protecting a concrete floor is to provide protection to the slab from deterioration or contamination, or to provide some added benefits such as aesthetics, wearability, non-skid surface and a myriad of other properties. Epoxy floor coating systems, which can be colored or broadcast with chips and quartz, are ideal for use in residential, commercial and manufacturing environments.

The entryway and walk were stamped with integrally colored Mirastamp, highlighted topically with stain, and sealed with a solvent-based sealer and slip resistance material.

"Thank you for doing such great work. The Decorative Concrete world needs more of you."

Darrel Adamson,
Creator and Owner
of Engrave-a-Crete
Systems

This beautiful pool in Douglas County is a MPC troweled overlay with a Mirastamp coping.

TABLE MOUNTAIN CREATIVE CONCRETE

Table Mountain Creative Concrete was established in 2004. Our mission is to transform your existing concrete and our goals are to do that through 1) uncompromised services, 2) exceptional productivity, and 3) impeccable quality.

Table Mountain Creative Concrete is a family owned and operated business specializing in staining, engraving, overlaying and stamping established concrete. The business center is located in Wheat Ridge, Colorado with easy access to all residential and commercial sites in the metro-Denver and surrounding area.

We are exceptionally proud of the men and women who work at Table Mountain Creative Concrete. With over 30 years of combined experience in overlays, staining, engraving, concrete coatings, and countertops, their work is artistic and long-lasting. Two fully equipped enclosed 14' tandem-axel trailers and Ford F-150's make it possible to travel to locations throughout Colorado and the Western Region. A studio showroom and warehouse/training center make it possible for customers to convert their ideas and dreams into a project plan. We have the pleasure of taking that project plan and transforming it into reality.

COUNTERTOPS AND FURNITURE

Concrete is an extraordinary material that is practical, expressive, affordable and durable. enCOUNTER is a professional countertop system that is strong, easy to use, and produces beautiful countertops and furniture consistently, time after time. Concrete can be transformed into virtually any shape. The possibilities for creative expression are endless. You can grind, polish, stain, stamp or embed objects within it. This is why concrete is an ideal medium between expression and architecture. In the hands of qualified craftsman, it can literally be turned into a work of art that will last for years with a little basic care.
